

## Preventive maintenance

**Even the most reliable systems require regular, planned and preventive maintenance to perform at optimum levels**

- ☞ Extend the operating life of your equipment
- ☞ Control of maintenance costs by reducing “on-demand” service and shut-down periods
- ☞ Ensure the performance of your equipment and its compliance with quality, regulatory and insurance standards (ISO 17025 certification)
- ☞ Include a warranty period after the works

After such a visit, AESA guarantees the equipment will operate **within its original specifications and performances**.

AESA proposes 2 types of services, from a single punctual preventive visit to an attractive full set of services.

	BASIC	PREMIUM
	1 single preventive maintenance	1 periodic preventive visit planned over 1 year
<b>ISO 17025 certification (equipment only)</b>	✓	✓
