

Cobalt 4 DT

Desktop fully integrated automatic test system for data cables

DESCRIPTION

Copper Communication Cables are specified for increasingly broader frequency ranges. Conventional balun based test equipment cannot measure more than three frequency decades, and that is the reason why the cable industry is looking for an alternative measuring method which overcomes this limitation. AESA unique automatic balunless test system based on the modal decomposition mathematical algorithm is your perfect solution.

By conducting measurements on individual wires and not just on pairs, Cobalt 4 DT allows measurement of a particularly wide range of parameters that cannot generally be tested by conventional methods. This fully integrated equipment is a valuable tool also to assist you in cable development. Equally important, final cable testing is rendered simpler and more reliable as it is fully automated, thus eliminating the need for the operator to conduct very cumbersome tasks with the associated risks of handling errors.

KEY FEATURES

- **Integrated solution**
 - 4 pair connecting frame
 - Embedded VNA (Vector Network Analyser)
 - Integrated computer and software
- **High-Tech**
 - Balunless technology (modal decomposition mathematical algorithm)
 - Executive HF switches using MIL standardized relays
- **Performant**
 - More than 170 parameters (including TCL measurement with integrated common mode)
 - Performs all electric tests on cables responding to major standards
 - checked against traceable calibration standards according to ISO/IEC 17025
- **Go over the limits**
 - Very broad frequency range (<3GHz) for cat 8 and higher
 - Full dynamic range available
 - Short cable length (10m)

AESA Cortailod

TECHNICAL SPECIFICATIONS

Measuring range	100 kHz – 3 GHz (Frequency extension upon request)
Integrated equipment	<ul style="list-style-type: none"> • 4 pair connecting frame for HF measurements • Embedded Network Analyser for HF measurements • Embedded windows based PC with operating system Windows 10 • 1 license OptiTest, AESA measurement and result management software • Power supplies, interfaces, connecting cables and measurement accessories
Standards	Performs all electrical tests on cables responding to: <ul style="list-style-type: none"> • ANSI/TIA-568-C.2 for Category 3, 5e, 6 and 6A • ANSI/TIA-568-C.2-1 for Category 8 • IEC 61156-5/-6 for Category 5e, 6, 6A, 7 and 7A • IEC 61156-7/-8 for cables up to 1200MHz • IEC 61156-9/-10 for Category 8.1 and 8.2
Supply voltage	100 - 240 VAC / 50-60Hz
Interfaces	6 x USB (e.g. for printer) 1 x VGA Display Port connector for external monitor (delivered with the system) 1 x DVI Display Port 1 x HDMI 1 x RJ45 for LAN connection
Dimensions	750 x 450 x 325 mm (29.5" x 17.7" x 12.8")
Weight	≈ 35 kg (78 lb)
Article No	30.3504.0005.0

ACCURACY

	100 kHz - 10 MHz	10 MHz - 100 MHz	100 MHz - 200 MHz	200 MHz - 400 MHz	400 MHz - 750 MHz	750 MHz - 1.5 GHz	1.5 GHz - 3 GHz

110 Ω - 130 Ω	± 1 Ω	± 1.5 Ω	± 2 Ω	± 2 Ω	± 3 Ω	± 4.5 Ω	± 6 Ω

AVAILABLE OPTIONS

- Low frequency parameters measuring unit
- Coaxial cable measurement (50Ω or 50+75Ω)
- Switch for options
- EMC parameters (Transfer Impedance TI, Screening Attenuation AS, Coupling Attenuation AC)
- Alien Crosstalk
- Connecting frame for connectors (e.g. RJ45)
- 9800 High Frequency standards
- 9000 Low Frequency standards
- Maintenance contract

AESA proposes other specific equipment for high frequency measurement.

KEY BENEFITS

USER-FRIENDLY

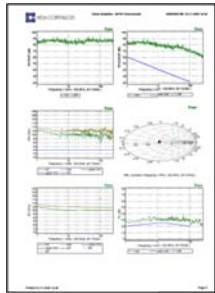

- Optitest software is multilingual
- Direct results without post calculation
- Calibration managed/saved by computer
- Test orders library

ISO 17025 ACCREDITED

ACCURATE

- The equipment is checked against traceable calibration standards according ISO/IEC 17025
- The risk of human error is reduced to its minimum

SMART

- All data (results and conditions) are saved on the internal PC
- Reports can be printed
- Data can be exported through the LAN in an ASCII or XLS file

Overview

SYSTEM

Fully integrated test system, no external component required.
 No balun so individual values per wire available and not only pair.
 Accept wire diameters between 0.3 and 1.0mm (28AWG to 18AWG).
 Full two ports calibration (Thru-Open-Short-Load) for high accuracy measurement.
 No movable parts for maximum measurement speed and reliability.
 Robust mechanical design studied to facilitate maintenance and servicing operations.

LOW FREQUENCY PARAMETERS (Optional)

The low frequency parameters feature is designed to measure pairs or quads.
 The resistance is measured at 4 points (Kelvin bridge)
 The capacitance can be measured at different frequencies in order to accommodate different cable lengths
 (Please refer to our application note 'Length Restrictions in Cable Testing').
 The feature provides self-calibration.

Measured parameters

	<u>Pairs</u>	<u>Quads</u>
Conductor Resistance	Ra, Rb	Ra, Rb, Rc, Rd
Loop Resistance	R	R1, R2
Resistance unbalanced	DR	DR1, DR2, DR3
Capacitance	C	C1, C2, C3
Capacitance unbalanced	K	K1-K12
Capacitance unbalanced to ground	Ei, Ea, E	Ei1-Ei3, Ea1-Ea3, E1-E3

Calculated parameters at (from 100Hz to 10kHz)

Attenuation
 Characteristic Impedance

Statistical parameters

Maximum and minimum measured values	Upper quality factor
Absolute minimum measured value	Lower quality factor
Average value	RC product
Quadratic average	Standard deviation RC
Standard deviation	Variance
and more ...	

HIGH FREQUENCY PARAMETERS

The high frequency parameters are measured as pairs only (1 quad = 2 pairs).

The measurement can be done according to a configurable curve or predefined fixed points.

2 connecting frames allow to connect both ends of the cable for an automatic measurement of all parameters.

A complete calibration is saved in the system allowing to change specifications without having to perform a new calibration.

Available HF parameters:

<p>Transmission/Reflection</p>	<ul style="list-style-type: none"> • Reflection Differential Mode (each parameter is available at near and/or far end): Return Loss dd, characteristic impedance, S11, Fitted impedance, SRL • Transmission Differential Mode (each parameter is available for forward and reverse measurement): Attenuation (Insertion Loss), S21, S21 phase, Phase delay, phase delay velocity, Group delay, Delay skew... • Reflection Common Mode (each parameter is available at near and/or far end): Return Loss cc, characteristic impedance, S11, Fitted impedance, SRL • Transmission Common Mode (each parameter is available for forward and reverse measurement): Insertion Loss, S21, S21 phase, Phase delay, phase delay velocity, Group delay, Delay skew... • Conversion Loss (each parameter is available for forward and reverse measurement): LCLdc, LCTLdc, TCLcd, TCTLcd, ELTCTLcd • Single Ended Reflection (each parameter is available at near and/or far end and for wire a and/or b): Characteristic impedance, S11, Fitted impedance, SRL • Single Ended Transmission (each parameter is available for forward and reverse measurement and for wire a and/or b): Attenuation (Insertion Loss), S21, Phase, Phase delay, In Pair Skew... • Single Ended NEXT: S31, S13, S42, S24 • Single Ended FEXT: S41, S14, S32, S23
<p>Near-NEXT</p>	<ul style="list-style-type: none"> • NEXT Differential Mode: Nextdd, PSNextdd, ACR-Ndd, PSACR-Ndd • NEXT Common/Differential Mode: Nextcd • NEXT Differential/Common Mode: Nextdc • NEXT • Common Mode: Nextcc
<p>Far-NEXT</p>	<ul style="list-style-type: none"> • Same as Near-NEXT but measured at the far end
<p>FEXT</p>	<ul style="list-style-type: none"> • FEXT Differential Mode: Fextdd, PSFextdd, Elfextdd, PSEIFextdd, ACR-Fdd, PSACR-Fdd • FEXT Common/Differential Mode: Fextcd • FEXT Differential/Common Mode: Fextdc • FEXT Common Mode: Fextcc

OPTITEST (Software)

The measuring system is equipped with OptiTest (a module of our CIQ quality data management software) which allows to prepare a measurement, to control the ATE to automatically acquire all the values of the defined parameters, to evaluate the results, to provide the measurement reports in the desired format and finally to save or export the measured values.

The software has been developed in the Microsoft® Windows™ environment and complies with the Windows features.

Creation and administration of test specification

The early creation of "Test Plan" file allows to define:

- the successive measuring sequences (Line test, LF, HF, EMC, ...)
- the appropriated limits and conditions (including complex limit curves)
- the scales (logarithmic or linear)
- the HF measuring method (sweep or frequency table; start/stop frequencies; number of points,...)
- the configuration of reports

The test plan is created only once per cable type and can be saved and re-used accordingly.

Possibility to create an unlimited number of cable specifications and test sequences.

These "test specifications" will be stored with an individual customised name and are easily retrievable.

Most of the limits and formulas recommended by the international standards are already integrated.

Their variables are programmable to enable the preparation of special specifications

Measurement

The operator only needs to connect the cable on the frame, set the right test plan, fulfil the specific data (order number, operator name,...) and start the full automatic measurement.

- Fully automatic calibration management including automated calibration procedure
- Preliminary line test to verify the cable connection (short cut, crossover,...)
- Switching sequences indicated by LEDs
- In case of problem, the operator can repeat the measurement or continue in accepting the wrong value.

Reporting

Report generation is set in the test plan and is automatically generated.

The results may be displayed, printed, stored as PDF files, exported (e.g. Excel) or sent by email.

Different highly comprehensive reports can be generated containing a limit case compilation with graphics and for each measuring block a separate summary with related graphics.

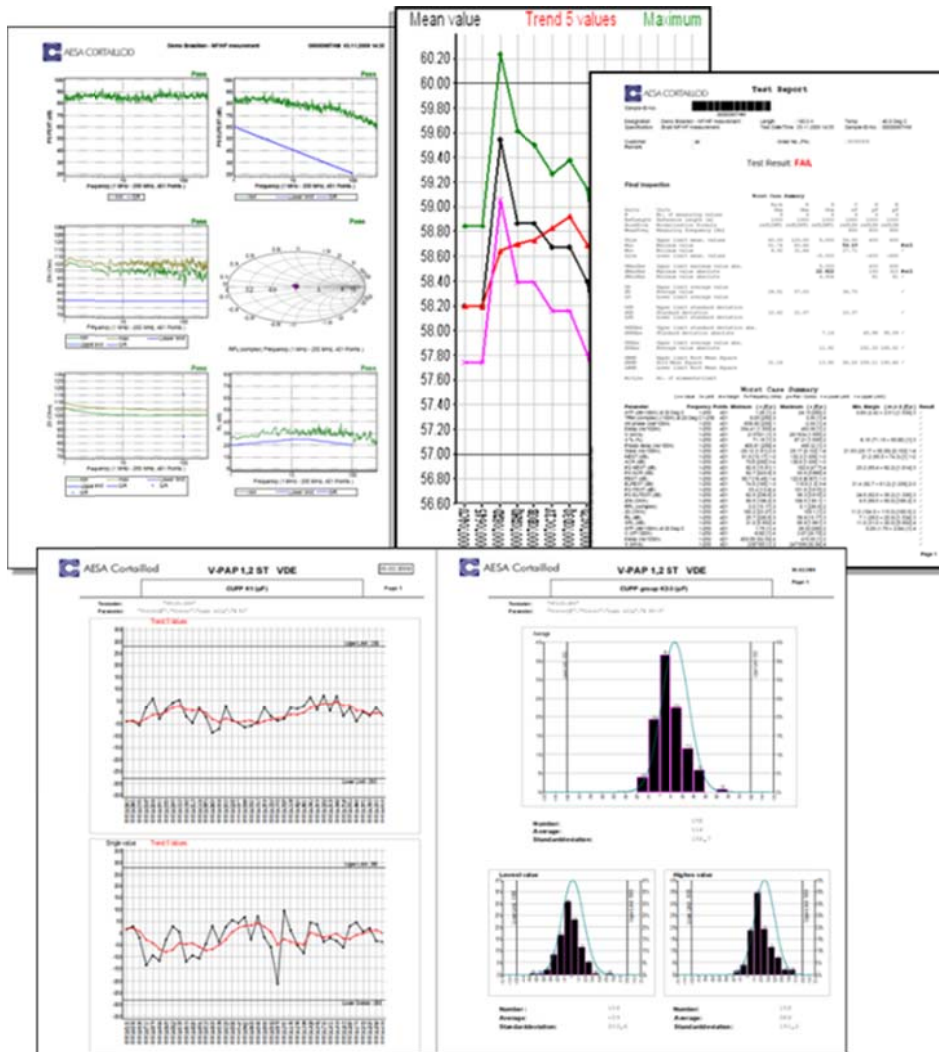

Filters and search criteria normally generate sample lists which facilitate multiple further actions such as:

- Display and process measured values
- Print reports and labels

Evaluation

All data is available for evaluation at any time. Thus, all test data of a cable can be collectively evaluated and printed. Some examples of how to perform evaluations are:

- Sample list sorted by test order
- Search with pre-defined or customized filters through the data pool
- Generate quality charts (statistics)
- Statistical distribution (Gauss type curve)
- Evolution and parameter survey as function of time
- Measurements repartition in a defined time period to determine the testing load

Data management

Connected to CIQ (AESA quality data management system), all data gathered with OptiTest can be used for further statistical evaluations and combined with other measurements gathered during the complete manufacturing process, from incoming good inspection to the dispatch of the finished product.

Options

1. Coaxial cables measuring option

The option includes the modification of the equipment (N-connectors, switch,...) and the related software module to allow the measurement of coaxial cables with Vega.

- 50 or 75 ohms coaxial option
- 50 + 75 ohms coaxial option

Article No: 50.0001.0031.0

Article No: 50.0001.0029.0

Coaxial accuracy (frequency range will depend on the VNA)	From	To		100 kHz	100 MHz	500 MHz	1 GHz	3 GHz
				100 MHz	500 MHz	1 GHz	3 GHz	6 GHz
S21 transmission (Attenuation, NEXT) corrected at 20°C	-80	-50	dB	± 1.5 dB	± 1.7 dB	± 1.9 dB	± 2.4 dB	± 3.0 dB
	-50	-25	dB	± 0.5 dB	± 0.6 dB	± 0.7 dB	± 0.9 dB	± 1.5 dB
	-25	-10	dB	± 0.2 dB	± 0.3 dB	± 0.4 dB	± 0.8 dB	± 1.3 dB
	-10	0	dB	± 0.2 dB	± 0.2 dB	± 0.4 dB	± 0.8 dB	± 1.3 dB
Impedance	50	50	Ω	± 0.5 Ω	± 0.7 Ω	± 1.0 Ω	± 1.5 Ω	± 4.0 Ω
	75	75	Ω	± 0.75 Ω	± 1.2 Ω	± 1.5 Ω	± 2.0 Ω	± 6.0 Ω

2. LF option for Cobalt 4 DA

Article No: 50.0001.0061.0

The low frequency parameters measuring technology provides a self-calibration. It is designed to test up to 4 pairs or 2 quads. Different measuring frequencies are integrated in the capacitance bridge. They can be used depending on the length of the cable

Description	Designation for pairs	Designation for quads	Accuracy	Scale
Conductor resistance	Ra, Rb	Ra, Rb Rc, Rd	± 0,1% + 10 mΩ	0 - 19,999 kΩ
Loop resistance	R	R1, R2		
Resistance unbalance	DR	DR1, DR2, DR3	Computed	%, Ω
Capacitance	C	C1, C2, C3	± 0,25% ± 10pF at 800 Hz ± 0,25% ± 10pF at 125 Hz ± 0,25% ± 50pF at 12,5Hz	0 – 2'000nF
Capacitance unbalance	K	K1 – K12	± 1% ± 6pF at 800 Hz	
Capacitance unbalance to ground	Ei, Ea, E	Ei1-Ei3 Ea1-Ea3 E1-E3	± 1% ± 3pF at 125 Hz ± 1% ± 30pF at 12,5 Hz	

Calculated parameters (from 100 to 10kHz)

3. Switch for options

The option includes the necessary hardware to connect specific options to the system (e.g. EMC,...).

- **Switch + 50 ohms N-connector for options**

[Article No: 50.0001.0032.0](#)

4. EMC Parameters (TI, AS, AC)*

To perform EMC measurements (Transfer Impedance, Coupling Attenuation, Screening Attenuation) with the tri-axial method, following accessories are required

- One hardware package to prepare the sample and take care for the impedance adaptation
- One software package (specific measurement module)

These accessories allow measuring the transfer impedance, the screening attenuation and coupling attenuation according to IEC 62153-4-9 when knowing the impedance of the internal coaxial cable created with the sample under test.

** this option requires a system with a 50 ohms switch. If the system is not equipped with it, it must be ordered separately.*

Pictures next page.

- **Transfer Impedance Kit, Ø 2.3 - 9.8 mm**

5. Option Alien Crosstalk AXT for ATE up to Cat. 6A (semi-automatic, incl. software)

Article No: 52.0001.0007.0

AESA has developed a software package along with a test procedure that allows the swapping of the different cables on a 4-pair connecting frame. It allows making all necessary measurements in a well-defined order. The software will then compute the measured crosstalk and show the results as specified in the standards.

This option is optimized for 4-pair unshielded cables (U/UTP) up to 500MHz.

Semi-automatic AXT option connecting frame

6. Option Alien Crosstalk AXT for ATE up to Cat. 8 (semi-automatic, incl. software)

Article No: 52.0001.0011.0

AESA has developed a software package along with a test procedure that allows the swapping of the different cables on a 4-pair connecting frame. It allows making all necessary measurements in a well-defined order. The software will then compute the measured crosstalk and show the results as specified in the standards.

This option is optimized for screened cables (X/FTP, F/UTP) up to 2000MHz and unshielded cables (U/UTP) up to 500MHz.

Semi-automatic AXT option Cat 8 connecting frame

7. Option for connector RJ45

Article No: 50.0001.0070.0

Patch cord for RJ45 connectors: easy and direct adaptation to the Cobalt frame.

Using a simple interface and introducing a de-embedding software correction, it doesn't need frequent and time-consuming calibration routines. It can provide not only the standard parameters as Next and RL, but also other cable parameters for development and further analysis

8. Set of ISO 17025 certified LF standards type AESA 9000

Article No: 45.9000.0001.0

This set of "Low Frequency" standards, certified ISO 17025, allows the periodic calibration, thus proving the accuracy of the complete measurement system. The kit is composed of:

- Standard type 9001 C1,2 19,20 nF ± 0,1 % ± 30 ppM/°C
- Standard type 9002 C1,2 192,0 nF ± 0,1 % ± 30 ppM/°C
- Standard type 9003 C3 16,0 nF ± 0,1 % ± 30 ppM/°C
- Standard type 9004 K1, K2, K3 16000 pF ± 0,1 % ± 30 ppM/°C
- Standard type 9004 E1, E2, E3 12000 pF ± 0,1 % ± 30 ppM/°C
- Standard type 9005 RA, RD 192 Ω ± 0,01 % ± 2 ppM/°C
- Standard type 9005 RB, RC 1920 Ω ± 0,01 % ± 2 ppM/°C

9. Set of ISO 17025 certifies HF calibration standards type AESA 9800

Article No: 45.9800.0001.0

This set of "coaxial" primary standards, certified ISO 17025, allows the periodic calibration, thus proving the accuracy of the complete measurement system (Vector Network Analyzer + RF multiplexer + connecting frame).

This set of "coaxial" primary standards should not be mixed up with the "symmetrical" zero correction kit, delivered with the ATE, which is used to carry out the periodical zero correction files of the equipment, required to measure LAN cables.

The set of certified HF standards is composed of:

- 2 attenuation references type 9801 – 3dB
- 2 attenuation references type 9802 – 6dB
- 2 attenuation references type 9803 –10dB
- 2 attenuation references type 9804 –20dB
- 2 attenuation references type 9805 –30dB
- 2 x 50Ω terminations
- 2 special connectors for the terminations
- 4 HF connecting cables for the attenuation
- 1 set of miscellaneous HF material

ISO 17025 ACCREDITED

10. Spare parts

AESA recommends following set of spare parts for a secured operation for two years:

Cobalt Type	HF measurement only (Mini kit)	Including optional LF measurement (Full kit)
1 CKE measuring bridge type KM		✓
1 R measuring bridge type RM		✓
1 LF relay matrix board type AZU		✓
1 CPU board		✓
2 test heads (4 if two different connecting frames)	✓	✓
2 HF relays (3 if two different connecting frames)	✓	✓
1 control boards set	✓	✓
1 set of HF cable	✓	✓
1 set of different mechanical and electronic hardware	✓	✓
