LINEAR RESISTANCE MEASUREMENT

ResTest 55

Universal & performing equipment designed for <u>small</u> conductors and <u>multicore</u> cables

DESCRIPTION

ResTest 55 is specially designed to measure both multicore cables and smaller sections.

The compacting jaws allow a drastic reduction of contact resistances between wires, thus ensuring a good distribution of the current. It is one of the key factors for precise and reproducible measurements. Self-cutting knives, with a LED based contact monitoring system, are allowing its use with insulated cables. The system includes a ruler with calibrated length and a temperature sensor to provide an accurate linear resistance value, directly in $\Omega/km @ 20^{\circ}C$.

This fully integrated equipment not only offers operating comfort, but also the mastering of all the uncertainties connected with the measurement. Therefore, AESA specifies the overall accuracy of the measurement and not the accuracy of the micro-ohmmeter only.

KEY FEATURES

- For both small conductors and multicore cables
 from very fine wires up to 50 mm² (1/0 AWG) conductors
- Ideal for any type of conductor
 - class 1 (rods & wires)
 - class 2 (stranded conductors)
 - o class 5/6 (flexible conductors)
 - $\circ\,$ sector-shaped conductors
 - insulated conductors
 multicore cables

Enhanced comfort

- self-cutting knives for both voltage and current contacts, LED monitoring system, interchangeable jaws
- Easy to use

 direct readings in Ω/km @20°C, button or touchscreen, embedded PC

Overall accuracy

o specifications related to the whole measurement, not the instrument only

OPTIONS

- · Compacting jaws
- Crank sleeve
- Label printer
- Conductivity/Resistivity
- Remote control software
- ISO17025 certified calibration box
- ISO17025 certified rod
- Warranty extension
- Maintenance contract

AESA proposes other specific equipment for the measurement in the laboratory and directly on the production line.

KEY BENEFITS

AESA P	A SA ResTest Resistance	Bridge	
ID	AESA310	Sn :	1#05659
Date	4/15/2011	Time	8:49:00 AM
a_CU	0.393 %/°C	0N1	20 °C
Rmes	+3.8109 Ω/km	Duration	00:00:14 / 2
Tmes	+20.70 °C		

ROI < 1 year

USER-FRIENDLY

- ResTest is multi-lingual
- Direct results without post calculation
- Only two buttons for ease of use in production
- Extended functions for the use in the laboratory

ACCURATE

- The equipment is certified ISO 17025
- All uncertainties are mastered
- The risk of human error is reduced to its strict minimum
- Specifications apply to the overall measurement
- Improved repeatability thanks to adequate jaws

SMART

- All data (results and conditions) are saved in its internal PC
- Labels can be printed directly on site
- Data can be exported through the LAN
- Traceability is easily managed

COST EFFECTIVE

- High accuracy allows raw material savings
- Simplicity of use reduces operational costs
- Reliable information allows process improvement
- Options can make the system even more efficient

UNIVERSAL

- All type of cables can be measured
 - class 1 (solid)
 class 2 (stranded)
 - class 5/6 (flexible)
 - sector shaped
 - insulated conductors
 - multicore conductors

Article No: 51.0180.0020.0

Options

1. Kit of compacting jaws

The compacting jaws increase the accuracy and reliability of the measurement. The set includes 4 different jaws, covering diameters from \emptyset 0.15 to 12 mm (AWG 35 – AWG 3/0).

They are specifically recommended for flexible cables.

Article No: 51.0030.0073.0

Adapter allowing the setting of the compacting forces with a torque wrench (not included in the supply) in an easier and repetitive way

3. Label printer (e.g. Brother QL-800)

This printer is directly connected to the USB port, printing labels like the example above.

Article No: 51.0030.0079.0

4. Conductivity / Resistivity

AESA Cortaillod developed a novel, fast and accurate solution to measure the conductivity / resistivity of solid conductors. The principle consists in 3 different steps:

- 1. Resistance & temperature (with ResTest)
- 2. Length with special ruler
- 3. Cross-section by volume measurement

→ Results are automatically computed & displayed

This new solution fills a gap in the linear resistance field with the precise conductivity / resistivity measurement for class 1 conductors (according to the IEC 60228 standard) in raw material incoming inspection test.

5. Remote control software (ResSoft)

Article No: 52.0030.0007.0

This software allows driving the resistance bridge in a remote mode with a compatible PC-Type computer. This is done using a USB interface.

This software enables:

- Library of conductor specifications
- Measurement monitoring
- Reporting
- Maintenance

6. ISO 17025 certified calibrationI box ResCal 1

Article No: 45.0001.0001.0

This standard is needed to verify the accuracy of each range of the ohmmeter. This standard is delivered with an ISO 17025 certificate.

Specification: \pm 0.1% and \pm 50 ppm/°C

Including 6 reference values:

- 1.0 mΩ
- 10.0 mΩ
- 100.0 mΩ
- 1.0 Ω
- 10.0 Ω
- 100.0 Ω

Delivered with ISO 17025 certificate

7. ISO 17025 certified manganin rod Ø 5.5 mm

This standard is needed to verify the overall accuracy of the equipment, included ruler and clamping jaws. This standard is delivered with an ISO 17025 certificate.

Maintenance Contract

Warranty Extension

extend the warranty period to 3 years.

Even the most reliable systems require regular, planned and preventive maintenance as well as periodical calibrations. AESA proposes service packages to extend the operating life of your equipment, control of your maintenance costs and ensure optimal performances.

AESA is confident with its technology and the quality of its goods. This is why the system is supplied with a 2-years warranty period. In order to protect its customer's investment, AESA offers the possibility to
